SUMMARY

I am a Flutter developer with two years of professional experience in building high-quality mobile applications. I excel at creating smooth, user-friendly experiences and developing scalable, well-structured app features. Throughout my work, I have gained strong skills in mobile development, problem-solving, and delivering reliable solutions that meet business needs. I am motivated, quick to learn, and always focused on improving product quality and performance. I'm now looking for new opportunities where I can contribute effectively and continue growing as a developer.

EXPERIENCE

software engineer | mobile app developer, *Dolf technologies* 01/02/2026 – Present

Flutter Developer, *Teba-link* 01/02/2024 – 12/01/2026
A software company specializing in accounting and administrative programs. Giza , Egypt

Flutter Developer, *Dar Alsaaed* 01/12/2023 – 01/06/2024
A company specializing in management and payment solutions, point-of-sale systems, and commercial and accounting software. Riyadh , Saudi Arabia

EDUCATION

Bachelor of Computer Science, 2018 – 2022
MET - Misr Higher Institute For Engineering & Technology. Mansoura , Egypt
2018-2022 (V.Good).

SKILLS

Mobile Application Development Dart & Flutter, Flutter State Management (Getx , Bloc , Provider)	Programming Languages & Backend Java, C++, JS, Node.js, OOP (Object-Oriented Programming)
Software Architecture & Design Clean Architecture, SOLID Principles, Design Architecture Diagrams.	Data & Integrations Real-Time Socket , Supabase, SQL Server Queries, Firestore DB (Realtime/Firestore), RESTful APIs, Databases
Development Methodologies Agile, Software Management, Research & Development .	DevOps CI/CD (e.g., Shorebird , GitHub Actions, Fastlane, CodePush)

LANGUAGES

- Arabic
- English

COURSES

Flutter Development Bootcamp. [↗](#), *The App Berwery*

The complete 2022 Flutter & Dart Development course [Arabic]. [↗](#), *udemy*

Flutter Clean Architecture [2022] [Flutter 3] (In Arabic) [↗](#), *udemy*

Foundations of project management. [↗](#), *Grow with google on coursera*

Software development processes Methodologies. [↗](#), *university of minnesota | Coursera*

Agile Software Development. [↗](#), *university of minnesota | Coursera*

The Complete Node.js Course (RESTful Web Services with Node.js, Express, and MongoDB), *maharatech*

PROJECTS

Illuminate Educational application (Graduation Project) [↗](#), *Illuminate is a Flutter-based graduation project aimed at helping illiterate individuals learn reading and writing through a volunteer- driven platform. The app includes two separate versions: one for teachers (volunteers) and another for students, ensuring effective communication and interactive learning.*

Negozio store [↗](#),

Negozio_store A small attempt to make an ecommerce application in Flutter for Android and iOS.

Technology and techniques used in the application:-provider state management-clean code and clean architecture-google maps -Alan AI Conversational Voice AI Platform -Firebase Cloud Messaging-gmail verification

Multi-Tenant ERP System (Online & Offline) ezee manager pro && tebalink ERP [↗](#), *A Flutter-based Multi-Tenant ERP system designed to support multiple businesses independently within the same platform. Each tenant operates in an isolated environment, ensuring secure data separation. The system functions both online and offline, with automatic data synchronization when connectivity is restored.*

Worked on enhancing and expanding a Multi-Tenant ERP System (Ezee Manager Pro & Tebalink ERP) built with Flutter, supporting both online and offline operation with automatic data sync. My role included improving existing modules, adding new features, refining the UI/UX, and optimizing system workflows. I developed printing and PDF modules, added new financial reports, updated invoice calculations, and contributed to building new components while restructuring parts of the application cycle multiple times for better performance and stability.

E-commerce Multi-Tenant Platform, *A Flutter-based multi-tenant e-commerce application that allows multiple vendors to manage their stores independently within the same platform. Each vendor has a dedicated dashboard for managing products, orders, and payments.*

- Built a **multi-tenant mobile app**, where **each client gets their own customized version**, with the option to publish it on **Google Play**.
- **Private dashboard for each client** to manage products, orders, layout, and settings.
- Integrated **secure payments**, real-time notifications, smart search, and API syncing.
- **Responsive UI** with **Arabic & English** support.

ALFAKHRA (تطبيق لشركة الفاخرة) [↗](#),

An application for Al Fakhriya men's fashion and tailoring company in the Kingdom of Saudi Arabia.

I worked on the first phase of transforming the app from native development to a cross-platform Flutter application, focusing on improving performance, UI consistency, and preparing the foundation for scalable future features.

Saaed Pay , *Saged Pay is a Flutter-based digital payment application designed to facilitate secure and seamless financial transactions. The app provides users with an efficient and user-friendly platform to manage payments, transfers, and financial services.*

Worked on transforming the company's financial application from native development to a fully optimized cross-platform Flutter app. Focused on improving performance, UI/UX consistency, and integrating advanced fintech features such as secure payments, NFC support, wallet management, money transfers, and multi-language support (Arabic & English).

Key Features I Worked On:

Secure digital payments, NFC Payments (NearPay Integration), Wallet system (add, store & manage funds), Bill payments, Money transfers, Transaction history, Multi-language support (AR/EN)

saaed pos

Worked on the **Order Management module only** within the system. Responsible for integrating REST APIs to fetch products, sending orders (items and quantities) to the backend using **WebSocket** for real-time updates, and handling dynamic quantity adjustments (increase/decrease) with instant invoice generation.

Ezee Restaurant - POS & Management System , *A restaurant management and POS application developed using Flutter for the frontend with direct SQL Server integration for data handling. The system operates locally without APIs, allowing fast and reliable communication directly with the internal database.*

I developed a full local POS system for restaurant operations from scratch, directly connected to SQL Server without an API layer. The system handles orders, billing, tables management, and real-time synchronization between kitchen, cashier, and waiter sections. I designed the UI/UX for fast workflow, added inventory management, receipt printing, and data tracking, and ensured offline functionality with high system stability.

Ezee HR - Human Resources Management System (Testing Phase) , *A Flutter-based Human Resources Management System developed to streamline HR operations and employee management. The app supports attendance and leave tracking, QR code-based check-in/out, and role-based user permissions, ensuring secure and efficient workflow management*

I developed a complete HR management mobile application from scratch using Flutter, integrating RESTful APIs for real-time data synchronization. The system includes QR-based attendance, user roles and permissions, and modules for employee data, leave requests, and attendance reports. I also handled testing and contributed to enhancing system stability.

Ezze customer (Development Phase)

Developed from scratch. A crucial mobile portal enabling end-users of client companies to access real-time financial account statements and view available inventory.

Taqeem

- Worked as a Software Tester on the Taqeem digital platform, ensuring the quality and reliability of core business and training-related services.
- Performed functional, integration, and API testing for RESTful APIs using Postman and Swagger/OpenAPI.
- Tested end-to-end payment workflows and validated different payment scenarios and transaction outcomes.
- Tested multi-tenant functionality, including tenant isolation, access control, and data segregation.
- Identified, documented, and tracked software defects using Jira, and performed regression testing to verify bug fixes.
- Collaborated with developers and business teams to reproduce issues, analyze defects, and ensure requirements were correctly implemented.

Qiyasi Project

- Worked on Qiyasi, a microservices-based platform, contributing to the design and implementation of the API Gateway layer using Apache APISIX.
- Configured and managed API routing between the API Gateway and backend microservices (Engines).
- Implemented authentication and authorization integration using Keycloak and APISIX.
- Designed API routing, request/response transformation, and service integration across multiple microservices.
- Implemented API security, access control, and authentication flows at the API Gateway level.
- Integrated and exposed backend services through the API Gateway and maintained API documentation using Swagger/OpenAPI.
